

ABSTRACT OF THE DISCLOSURE

A rotating force transmitting apparatus includes:
a first and a second transmitting devices for
transmitting rotating forces to a first and a second
5 rotary members, wherein the first and the second
transmitting devices include a first and a second
clutches for intermittently transmitting the rotating
forces; a common driving device for imparting the
rotating forces to the first and the second
10 transmitting devices, wherein the second clutch can be
switched from the turned-off state thereof to the
turned-on state thereof for rotating the second rotary
member when the first rotary member is rotating with
the first clutch being turned on; and a permitting
15 device for permitting the transmission of a rotating
force only in a normal rotational direction of the
driving device to the first transmitting device.
